Card Sorting

Card sorting is a method that provided user-centered information architecture. This method ensures the structure of your designs matches your users mental.

Example:

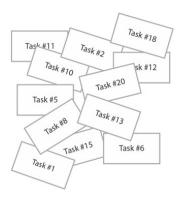

STEP 1: Write user tasks on index cards

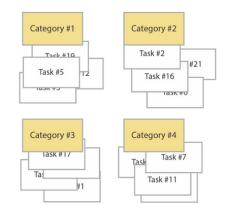

user defined categories on other index cards

STEP 3:

Have participants categorize the task cards to match their mental models

Category #1	Category #2
Category #3	Category #4

Card Sorting

Project: _____ Date: _____

Sample size:	

Card quantity:

Results:

Notes	Participant quotes	Card groupings
